

Sustainable cities of the future: the challenge of urban design

Paul Linden

*Director of Research, DAMTP
University of Cambridge*

By 2050 it is estimated that three quarters of the world's population will live in cities occupying just two percent of the global land mass. How will we do this without using unsustainable amounts of energy to heat and cool buildings within an environment that maintains pleasant external conditions that promote the health and well-being of the population? Paul Linden will describe a project on 'Managing Air for Green Inner Cities' (MAGIC) that addresses the challenge of cities with no air pollution and no urban heat island by 2050, and show how the integration of green and blue spaces, along with innovative building design, can take us a long way towards that goal.

Wednesday, 21 November, 2018
CAR Offices, 25 Gwydir Street
Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please email carshowrooms@carltd.com by Tuesday 20 November if you will attend.
