

Future-proofing for Climate Change

Map of UK cities and predicted 2080 future summer climate illustrated by its 'summer' cities

Sofie Pelsmakers

*Environmental Architect, PhD researcher at the UCL Energy Institute
Author of The Environmental Design Pocketbook (RIBA Publishing)
See www.environmentaldesignpocketbook.com*

Our climate is changing. As designers and planners of buildings and cities we have a duty to take climate change impacts into account. Doing so will help protect human life and comfort and conserve limited available resources and biodiversity. But how can we 'future-proof' our built environment, particularly when it is impossible to precisely predict future changes? Sofie Pelsmakers will set out some practical and robust design solutions and practices which should be practised today for a sustainable tomorrow.

Wednesday, 24 October, 2012

Magdalene College, Cripps Court, 1-3 Chesterton Road, Cambridge

Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please let Maria know by Tuesday, 23 October, if you will be attending (maria.sylvester@carltd.com).
