

From Data to Design in New Bamboo

Challenges in modelling structural and environmental performance

Helen Mulligan

*Director
Cambridge Architectural Research*

Michael Ramage

*Senior University Lecturer
Department of Architecture, Cambridge*

The worldwide search for sustainable solutions in the construction industry has turned to the possibilities of Structural Bamboo Composites. These seek to overcome the limitations of traditional bamboo building: lack of predictable performance, durability and dimensional standardisation. But basic information is lacking on many of these new products too. How then are designers to use them with confidence?

Tuesday, 9 July, 2013
CAR Offices, 25 Gwydir Street
Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please let Maria know by Monday, 8 July, if you will be attending (maria.sylvester@carltd.com).
