

Estimating the impacts of spatial planning on the potential of environmental technologies

Dr Tony Hargreaves
CAR Associate

Tony will discuss a method of forecasting how spatial planning policies and the resulting urban densities affect the potential of environmental technologies. This will use decentralised energy supply for dwellings as an example, and show how the suitability of these technologies, their carbon dioxide reduction per capita and cost effectiveness would vary greatly across the region. This raises issues about how best to target incentives and regulations for renewable supply.

Wednesday, 15 April, 2015
CAR Offices, 25 Gwydir Street
Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please let Anna know by Tuesday, 14 April, if you will be attending (anna.petrosyan@carltd.com).
