

## Holistic Acoustic Architecture

*The acoustically renovated hall of the Church of San Lorenzo da Brindisi following the innovative sound intervention by NACSound*

### Francesco Pellisari and Laura Montanini

Sound may not be visible yet it is a key element of the built environment. Good acoustics can positively transform space whilst bad acoustics can be detrimental.

The developing trend of holistic acoustic architecture aims to use sound as a key component of design. Francesco Pellisari, a world-leading acoustic engineer, has been working in this field for over twenty years and, along with the architect Laura Montanini, has successfully modified the built environment in ways that enhance the acoustic experience for a number of buildings across Europe.

The seminar will focus on outlining both the theoretical and the practical aspects of holistic acoustic architecture, exemplified by a case study.

Wednesday, 18 April, 2018  
CAR Offices, 25 Gwydir Street  
Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please email [carshowrooms@carltd.com](mailto:carshowrooms@carltd.com) by Tuesday, 17 April, if you will attend.
