

Systems Games: From Control to Participation

What can we learn from the way natural living systems operate?

Robin de Carteret

Educator and Consultant in Complexity Science and Sustainability
SystemsGames.org.uk

We live in an increasingly uncertain world – with instability in climate, financial systems, and access to resources. Understanding the world as a complex, interdependent system will help us organise for resilience. This workshop will use experiential activities that model complex systems and concepts such as feedback, emergence, chaos/stability and self-regulation interspersed with inspiring images and film clips of natural systems exhibiting complex emergent behaviour.

Wednesday, 22 May, 2013

CAR Offices, 25 Gwydir Street

Drinks from 5.30 p.m. Talk at 6.00 p.m.

Please let Maria know by Tuesday, 21 May, if you will be attending (maria.sylvester@carltd.com).
